THE AS9100C, AS9110, AND AS9120 HANDBOOK: UNDERSTANDING AVIATION, SPACE, AND DEFENSE BEST PRACTICES BY JAMES CULLITON PDF

AS9100, AS9110, and AS9120, the quality management system (QMS) standards for the aerospace industry, are written in the most ambiguous language possible. Indeed, they don't outline how they should be implemented. Those decisions are left to the organization implementing their requirements or, in some cases, to a consultant.

Although some consultant firms for aerospace systems are excellent, there are many that purport to be experts yet proffer systems and processes that are either in contravention to the standards' requirements or so unwieldy that they render the process impotent.

In an effort to simplify these issues, this book proposes practices that have been described as opportunities for improvement or best practices by registration auditors in the past. It includes a discussion of each of the three standards' clauses, suggests best practices to comply with them, outlines common findings associated with them, and provides an overview of the changes to AS9100C from AS9100B.

Good but not what was expected

By Give It To Mikey

You really still have to work from ISO 9000 and AS91xx and find examples that other companies have implemented as this book does not summarize or quote to material. It's really a commentary on top of these standards meant to help prepare you for an audit. It details common major and minor findings to help you check your system for completeness. It offers some examples for basic implementation but not for everything that is required. Worth the money, but don't expect this to teach you how to build a quality system from the ground up.

Excellent must have book for QMS people

By Alicia Abel

Excellent book easy to read my third from this author. I could not be without it.
